Potentially 87 working years lost in 2008, 94 in 2009

This is calculated by taking an approximate midpoint of each time bracket (e.g. 21 days-less than 1 month = 26 days).

The number of instances in each time bracket is multiplied by the midpoint value (e.g. 26 days * 109).

The values for all brackets (not including 'Days lost unknown') are then added up to give a total figure.

This total figure is divided by 240 (a rough average of working days in a year) to enumerate to working years.

Potentially 108 working years lost in 2010, 94 in 2011 and 79 in 2012

This is calculated by taking an approximate midpoint of each time bracket (e.g. 21 days-less than 1 month = 26 days).

The number of instances in each time bracket is multiplied by the midpoint value (e.g. 26 days * 109).

The values for all brackets (not including 'Days lost unknown') are then added up to give a total figure.
