Public Information on an upper-tier establishment as required by Regulation 25

Information on upper-tier establishments

All establishments subject to the *COMAH Regulations 2015* have submitted a notification in a standard form to the Authority. This includes information on their location, the hazard categories of the dangerous substances present with an indication of their dangers, emergency action information and sources of additional relevant information.

Additional information has been provided by upper-tier establishments, including details on the possible major accidents arising in the establishment and the action to take in the event of an emergency.

General Duties on Operators

Operators have a general duty to identify all the major accident hazards in their establishment, take all necessary measures to prevent major accidents and to limit the consequences of such accidents to human health and the environment.

Operators of upper-tier establishments are also specifically required to ensure that 'all persons likely to be affected' by a major accident originating at the establishment receive clear and intelligible information on safety measures and on what they should do in the event of a major accident. This information must be directly supplied to all buildings and areas of public use, including schools and hospitals and, in the case of domino groups, to all neighbouring establishments.

Information on emergency plans

Information on external emergency plans may also be available from the Local Authority, the Gardaí and the Health Services Executive.

Public information for an upper-tier establishment

This establishment is subject to the COMAH Regulations 2015 and has submitted a notification to the Authority.

The following information, which has been extracted from the notification, fulfils the requirements of Regulation 25(3)(a).

The date of the most recent COMAH inspection (added by the Central Competent Authority) can also be found in the table below.

| | | |
|------------------------------------|---------------------------------|--|
| Nature of major hazards (1) | Nature of major accident | Release of dangerous substances with potential for adverse environmental effects. |
| | Potential human health effects | Pollution and contamination of drinking water supplies with consequent health effects. |
| | Potential environmental effects | Dangerous substances entering freshwater or estuarine waters and causing harm to the aquatic environment. |
| | Scenario details | Spillage of LIX® from Bulk storage tanks leading to pollution of the estuary giving rise to harm to marine life |
| | Control measures | All of the establishment's storage tanks, process vessels, pipework and control systems are designed and maintained to an appropriate standard to prevent major accidents. Suitable arrangements are in place to prevent or minimise loss of containment of dangerous substances. Containment systems are in place for relevant work areas to minimise the loss of spilled material to the environment. Emergency arrangements are in place to notify the local authority if dangerous substances are accidentally discharged into the sewer. Maintenance schedules on storage tanks, bund integrity testing in place, access control to site in place |
| | Onsite response | This establishment has prepared an internal emergency plan for major accidents which is tested at least every 3 years, has liaised with the emergency services and agreed on the actions and arrangements to deal with major accidents and minimise their effects. |
| | Offsite effects/action | A publicly available external emergency plan has been drawn up by the local authority, Gardaí and HSE to respond to any consequences outside this establishment as a result of a major accident. |

| | | |
|------------------------------------|---------------------------------|--|
| Nature of major hazards (2) | Nature of major accident | Fire and Explosion |
| | Potential human health effects | Injuries caused by projectiles being ejected from the incident site. |
| | Potential environmental effects | |
| | Scenario details | Aldoxime Plant, failure of a high pressure vessel resulting in an explosion. |
| | Control measures | All of the establishment's storage tanks, process vessels, pipe work and control systems are designed and maintained to an appropriate standard to prevent major accidents. Detectors are in place to alert staff to any loss of containment. Potential ignition sources are eliminated in accordance with the ATEX Directive to protect against the ignition of flammable material. Overpressure prevention systems are in place as necessary. The plant has installed safety instrumented systems to SIL3 standard to control plant operations |
| | Onsite response | This establishment has prepared an internal emergency plan for major accidents which is tested at least every 3 years, has liaised with the emergency services and agreed on the actions and arrangements to deal with major accidents and minimise their effects. |
| | Offsite effects/action | A publicly available external emergency plan has been drawn up by the local authority, Gardaí and HSE to respond to any consequences outside this establishment as a result of a major accident. |
